

The policy of applying the energy management system

The application of an efficient and effective energy management system is a permanent commitment of EP-BELT DOO LOZNICA and an integral part of responsible behavior towards the preservation of energy resources and the environment.

EP-BELT DOO LOZNICA expresses its commitment to responsible and sustainable energy management by:

- ensures the availability of necessary resources to achieve general and energy goals;
- complies with applicable regulations and other requirements related to energy use, consumption and energy efficiency;
- acquires energy-efficient resources for carrying out activities;
- procures energy-efficient products and services for carrying out activities;
- ensures availability of necessary information for energy management;
- makes energy decisions from the point of view of sustainability adapted to the life cycle;
- when designing new buildings and products, it respects the requirements related to responsible and sustainable energy management;
- prepares and reports on the inventory of greenhouse gas emissions;
- promotes awareness of energy efficiency among employees and interested parties;
- permanently improves energy performance;
- permanently improves energy effects;

Energy management is constantly measured and monitored.

The policy of applying the energy management system provides a framework for setting energy goals. Along with energy targets, emission targets are also established.

Stakeholders are regularly informed about energy aspects, energy use, energy management program and the degree of achievement of energy goals.

For the implementation of the Policy on the implementation of the energy management system, the engagement of all employees is necessary. Employees are trained and informed about energy issues and are included in the energy management program.

The policy of applying the energy management system will be periodically revised and supplemented as necessary.

EP-BELT DOO LOZNICA permanently plans, implements, checks and improves the energy management system in order to ensure business success, stable operations, sustainability and further development.

Understanding and implementation The policy of applying the energy management system is the responsibility of all employees.

The policy of applying the energy management system is communicated and available to all interested parties and the public.

Loznica, February 2022

EP-BELT DOO LOZNICA
